

# 5G Vertical User Webinar Series

Supporting Industry Verticals  
on the Road to 5G Standardisation

5G User Event Series 2020-2021

# Highlights and Impacts

#### **Author**

Stephanie Parker, FULL5G and Vice-Chair of the 5G-IA Pre-Standardization WG

#### **Co-authors**

John Favaro, FULL5G and member of the 5G PPP Automotive WG  
Paul Vosker, Huawei, ETSI and 3GPP

#### **Graphic Design**

Lorenzo Calamai, Trust-IT

#### **Acknowledgements**

The success of the 5G User Event series is very much a joint effort. On behalf of FULL5G, 5G-IA and its Pre-Standardization Working Group, 5G Automotive Association, 5G Alliance for Connected Industry and Automation, Public Safety Communications Europe and, more recently, 5G Media Action Group, we'd like to say a special thank you to all our expert panellists from across the globe, who have brought essential insights into many aspects of 5G standardisation. It has been an absolute pleasure to work with you all. Thanks are owed to Dr Colin Willcock, 5G-IA Chair, Alessandro Bedeschi, 5G-IA Head Office, Dr Alexandros Kaloxylos, 5G-IA Executive Director for their valued support throughout. We also extend our thanks to Jacques Magen, INTERINNOV and Chair of the NetworkEurope SME WG for the video post-production and especially for his support in helping us reach so many IT- and Network-savvy SMEs. Thanks also go to Hans van der Veen, NEC Labs Europe and RAN specialist in the 5G-IA Pre-Standardization WG, for his regular updates on 3GPP RAN and support of the two June workshops. Last but definitely not least, special thanks to the Chair of the 5G-IA Pre-Standardization, Riccardo Trivisonno, for his support and suggestions along the way.

# Executive Summary

5G networks are bringing a new disruptive ecosystem to industry verticals spanning automotive, broadcasting and media, energy, health, manufacturing, maritime, public safety, transport and others. To capture these benefits and ensure requirements feed into 3GPP standardisation, in early 2019 four Market Representation Partners got together with top experts in 3GPP<sup>1</sup> with a view to encouraging the community to embrace verticals, optimally capture end-user requirements and support contributions to the standardisation process. The approach is bottom-up, member-based and consensus-driven.

These MRPs are the 5G-Infrastructure Association (5G-IA<sup>2</sup>), the 5G Automotive Association (5GAA<sup>3</sup>), the 5G Alliance for Connected Industry and Automation (5G-ACIA<sup>4</sup>) and Public Safety Communications Europe (PSC<sup>5</sup>). In early July 2021, the 5G Media Action Group (5G-MAG<sup>6</sup>) joined us on our journey, helping us to build on our successes thus far.

With two physical events in 2019, the shift to virtual events was swiftly made in 2020, with webinars on:

## Table of Contents

<b>3GPP Releases 16 and 17 for Industry Verticals (May 2020)</b>	<b>p.4</b>
<b>5G Spectrum for Industry Verticals (June 2020)</b>	<b>p.6</b>
<b>5G for Healthcare, Social Care and Public Safety (July 2020)</b>	<b>p.8</b>
<b>3GPP Release 18 for Industry Verticals (November 2020)</b>	<b>p.10</b>
<b>Edge Computing: Viewpoints from Industry Verticals (April 2021)</b>	<b>p.12</b>
<b>3GPP Standardisation on Edge Computing (April 2021)</b>	<b>p.14</b>
<b>RAN Release 18 for Industry Verticals (June 2021)</b>	<b>p.16</b>

The event series is an excellent example of how we can intensify joint efforts across the ecosystem working towards convergence on global standardisation, which benefits everyone. Here we report on the main outcomes and impacts of the events so far, where we have been following diverse industry verticals through specialists suggested by associations and other members of the Programme Committee to the widest possible coverage of verticals and continuity across iterative 3GPP releases. We highlight the events on 3GPP Releases, especially Release 18, where there are important opportunities for contributions from verticals. Consensus building has been a priority throughout the series, collecting multiple viewpoints from participants as part of an open, global dialogue. We extend our deepest thanks to our large, international community for joining us on our journey and look forward to continued engagement in the future.

5GACIA

## Highlights

306 people signed up for this webinar from 13 European countries and 14 countries across the globe, with the highest number of participants coming from Germany, Italy, France, India, UK and USA.

- During the global COVID-19 pandemic, the role of cellular networks has become greater than ever, with work in 3GPP working virtually at full throttle. The commitment of companies to contribute and innovate is as strong as ever.
- Practical guide for industry verticals on Releases 16 and 17 with tips on why and how to get involved in 3GPP and bring in a new set of requirements. Both TSG RAN and SA chairs take newcomers through the paces on how to define and communicate new requirements and plan their contributions through a member, consensus-building approach.
- The success of verticals in 3GPP, with membership growing exponentially, shows that processes work well. However, 3GPP welcomes newcomers and has mechanisms that can ease their entry into the right working group(s).
- Releases 16 and 17 enhance the eMBB foundation. Foundational areas: Coverage, capacity, latency, power saving, mobility. Expanded deployments: New spectrum, topologies, integrated backhaul. New services: Latency, reliability, positioning, use cases like XR.
- Broad variety of features for verticals in Releases 16 and 17, with more coming in Release 18. Release 17 has many study items in SA1 (Services), which are explicitly verticals, e.g. railway, smart energy, mission-critical communications, or have a strong impact on verticals, e.g. IoT networks, 5G timing resiliency system. In Release 17, there are continued enhancements to better support industrial IoT requirements (e.g. private networks, ultra-reliable low-latency communication (URLLC), time sensitive networking (TSN), positioning. 5G enabling technologies bring new functionalities as a toolbox, where verticals can cherry pick the functionalities they need to create new services.
- 5G New Radio (NR) is a unified, scalable air interface, allowing

coexistence of a wide range of 5G device classes. NR-Light expands the 5G device ecosystem, with lower complexity devices, e.g. smart grid, industrial cameras, healthcare monitoring.

- Strong 5G cellular technology evolution is more evident than ever. 5GNR-V2X continues the evolution to bring new benefits, e.g. advanced safety, faster travel, energy efficiency and accelerated network effect. Rel-17 will enhance C-V2X performance and expand to more road users (e.g., bicycles, scooters) with new power saving features.
- On-going developments on 5G for the Industrial Internet of Things (IIoT) come from Michael Bahr, Siemens, 3GPP rapporteur and WG leader on Use Cases and Requirements in 5G-ACIA.
- Antonio Arcidiacono, Chair of 5G-MAG, explains how 5G-enabled innovations are transforming broadcast media through enhanced services and 5G standardisation.

### Webinar recording:

<https://www.youtube.com/watch?v=Q6SCUvMXnWY&t=41s>

**Poll findings.** The first poll sends a clear message that market interest in 5G is global, with 55% of respondents operating in markets worldwide, 32% in Europe and the rest distributed across Asia, India and North America. Understanding how many participants are already part of 3GPP was the focus of the second poll, with 57% stating they are and 25% that they are interested in becoming members. The last poll asked participants for their viewpoints on 3GPP coverage of verticals, with 25% of respondents believing there is good coverage and 57% seeing an opportunity to bring in more verticals.

# 5G Spectrum for Industry Verticals

Webinar, June 2020

# 5G Spectrum for Industry Verticals

Insights from: 5GAA, 5G-ACIA, 5G-IA and PSCE

**PANELLISTS**  
 Frederic Pujol, EU 5G Observatory  
 Reza Karimi, Huawei and 5GAA  
 Ulrich Rehffuss, Nokia and 5G-ACIA  
 Antonio Arcidiacono, European Broadcasting Union  
 Gérard Carmona, Ministère de l'intérieur  
 Sebastian Euler, Ericsson and 5GCroCo

## Highlights

379 people signed up for this webinar from 13 European countries and 14 countries across the globe with the highest number of participants coming from Germany, Italy, France, as well as USA, UK, India and China. In the face of diverse spectrum requirements across verticals, some still in a nascent stage, several open questions and critical actions needed to optimise spectrum usage, this webinar brought together top-level experts in the field to help understand how to get the balance right.

- There is a pressing need for cooperation across verticals and other stakeholders to ensure the best possible use of spectrum. By joining forces, industry verticals can work out ways to optimise spectrum usage, such as combining different technologies and frequency bands, including the use of multicast and broadcast technologies.
- Optimised spectrum usage must also focus on sustainable approaches, including coverage of the entire population, spanning mobiles and vertical use cases.
- A key challenge lies in finding viable solutions that will trigger investments across operators, verticals and governments in the right measure while working out the best possible RoI. Cooperative models could be the way forward for best using this scarce resource. The key lies in prioritising smarter, combined approaches.
- There is a critical need for a common technical base and harmonisation to avoid having many different device frequencies, for example, by harmonising certain bands at the global level or across large regional areas. Nor is it possible to build devices for small markets.
- The 5GAA recommendation is that national and regional administrations ensure the availability of sufficient spectrum for mobile communication networks in the so-called low bands and mid bands to support services, including Intelligent Transport Systems (ITS), in the coming decade.

### Webinar recording:

[https://www.youtube.com/watch?v=0\\_VHSII2N5A&t=8s](https://www.youtube.com/watch?v=0_VHSII2N5A&t=8s)

**Poll findings.** The poll asking participants how familiar they are with spectrum requirements in their respective countries sends a clear message that the 5G community, including industry verticals, needs to be kept informed of spectrum assignments, with just 32% very familiar and 20% not at all familiar. The second poll also sends a clear message about the need for spectrum assignments to support specific 5G use cases with 90% consensus amongst poll responders. More generally on priorities for lowering entry barriers for industry verticals, respondents believe that ensuring a balance between public and private networks and spectrum harmonisation are key moving forward.

# 5G for Healthcare, Social Care and Public Safety

 5G ACIA  
 NETWORK

## Highlights

183 people signed up for this webinar on 5G for health, social care and public safety from 16 European countries and 8 countries from across the globe. The highest participation came from the UK, followed by Germany, France, Spain and the Netherlands. High turn-out from the UK is also thanks to the promotional support of the UK5G project Mobile Access in North Yorkshire (MANY).

This webinar explored several concerns around the differentiating characteristics of 5G, from massive machine type communication, to latency and reliability issues, to extreme security and privacy requirements for “mission-critical” applications and the often neglected but critically important challenges facing social care.

- 5G can bring real innovations in terms of better services and new applications in essential areas for citizens, spanning health and social care. With this in mind, we need stronger collaboration across the public and private sectors, including SMEs. Funding is essential to fill the white spots in the sector.
- Greater awareness of 5G is needed through training and education. Any solution for integrated, virtualised healthcare needs to prove that the system works. On top of this, we need harmonised regulations to level the playing field. Popularised misconceptions about 5G that are hampering adoption in the sector. Busting the Myths About 5G – Facts Versus Fiction<sup>7</sup> clarifies these misconceptions in a straightforward manner.
- The 5G Health Association<sup>8</sup> seeks to tackle barriers to adoption. Its white paper, 5G Health - The Need for 5G Technologies in the Healthcare Domain<sup>9</sup>, gives key insights into and updates on why we need 5G for future healthcare, what makes 5G different from current technologies, how 5G can be used to manage hospitals and departments within them, post-discharge services, support emergency responders. It also covers requirements and KPIs for medical applications.

- A common, global standard for digital and mobile health would go a long way in accelerating adoption in healthcare and pave the way for integrated solutions that empower both healthcare professionals and patients.

### Webinar recording:

<https://www.youtube.com/watch?v=eF2qlAruYaw&t=1s>

**Poll findings.** The first poll asked participants about the main barriers to 5G adoption in healthcare with privacy and security issues and strict regulations in the sector being the top two. The second poll focused on the topic of future webinars asking participants to choose from technologies like edge computing and artificial intelligence (29%) from diverse industry verticals with automotive and healthcare being the most popular (both, 13%).

## Highlights

229 people signed up for the webinar part 1 on Edge Computing: Industry Viewpoints from 29 countries worldwide. The highest participation comes from Greece, Spain, UK, Greece and Italy.

This webinar is a deep dive on the edge computing landscape, highlighting on-going work in automotive, manufacturing and the Industrial Internet of Things, as well as standardisation work in ETSI and open-source approaches.

- Leonardo Gomes Baltar, Intel and 5GAA gives insights on MEC4AUTO, enabling edge computing to support cellular V2X use cases. 5GAA has a dedicated work item on this because it offers cloud capabilities at the edge of the network; it is a key supporting technology for many V2X services for connected vehicles and automated driving. .
- Samita Chakrabarti, Verizon and 5G ACIA, zooms in on the applicability of 5G industrial edge computing. The use-case and requirements studies are considering input from 3GPP TS 22.104, TR 22.832 and TR 22.804, ETSI MEC Enterprise use-cases and 5G-ACIA defined key use-cases:
- Need for virtualisation and offloading of applications on the premises.
- Impact of Edge computing on AR/VR applications and AI processing.
- Use-cases on Automatic Mobile Robots control, local processing using AI and computer vision.
- Said Tabet, Dell Technologies and AECC<sup>13</sup> explains how this association is tackling the big data challenge, e.g. through its intelligent driving use case, which uses machine learning for a better, safer autonomous driving experience, with data collection including cruising data, control data and biometric sensor data.
- Gabriel Yu Yang, EdgeGallery<sup>14</sup> explains how EdgeGallery is aimed at accelerating digital transformation and the commercial use of MEC by building an open source edge computing project that is compatible with "connection + computing" in the telecom industry. EdgeGallery is a carrier-led edge computing architecture and capability openness de facto standards. It is designed to lower the threshold for enterprise application deployment, build a scale, and build a 2B business ecosystem.
- Nurit Sprecher, Nokia and co-founder of ETSI MEC<sup>15</sup> shares updates on important developments, highlighting that:
  - MEC is coherent with the ambition for openness, innovation and growth, with a common API framework for 3rd-party plug-ins and open APIs for data exposure and programmability.

- It is flexible and extensible, aligned with the overall cloud transformation, a natural element of 5G and key enabler for IoT, mission critical, vertical solutions. It also enables collaboration between operators and businesses.
- The fundamental MEC specifications are ready. ETSI MEC is widely recognised in the industry as the leading standards organisation for application enablement and edge computing.
- There are vast business opportunities at the edge. The increase in edge initiatives can use MEC to ensure common practices, drive adoption and accelerate time to market.

Industrial automation, digital twins and infrastructure control are among the top drivers for the growing interest in edge computing. Collaboration on edge computing is essential, with the 5G User Forum potentially being a focal point for educating businesses and consumers, on software and hardware and relevant standardisation.

### Webinar recording:

<https://www.youtube.com/watch?v=ul55CDqAz7M&t=24s>

**Poll findings.** Only 16% of respondents have already implemented their commercial edge strategy, others are either developing one (26%) or exploring market opportunities (58%). The top requirements for edge are low latency (33%), service continuity (21%) and interoperability (16%). After automotive, respondents see manufacturing as an early adopter of edge (36%), followed by broadcast media, warehousing and logistics (both, 18%).

## Highlights

191 people signed up for part 2 on 3GPP Standardisation on Edge Computing, bringing the total for this two-part series to 420. The highest number of participants came from France, Spain, Germany, UK and India. Part 2 of the webinar on edge computing is another deep dive, this time on standardisation work on edge computing within 3GPP, with short presentations and interactive discussions with top experts.

- Puneet Jain, Intel and Chair of 3GPP SA2, walks participants through 3GPP standardisation on edge computing in the 5G core, which started in Release 15.
  - Release 15 covers user plane (re)selection; Local Routing and Traffic Steering; Session and service continuity; Network capability exposure; QoS and Charging; Support of Local Area Data Network.

Study and work items in Release 17:

- Study on enhancement of support for Edge Computing in 5GC (completed in December 2020).
- Enhancement of support for Edge Computing in 5G Core network (target completion date: June 2021).
- SA2 (Stage 2) normative work is 60% complete. Target stage 2 freeze date is June 2021.
- Stage 3 is expected to finish by March 2022.
- Relevant Specifications: TR 23.748, TS 23.548, TS 23.501, TS 23.502, TS 23.503.

- Suresh Chitturi, Samsung and Chair of 3GPP, talks participants through 3GPP SA6 EDGEAPP - Architecture for enabling Edge Applications and 3GPP industry harmonisation with ETSI MEC and GSMA OPG.
  - Application developers need support for Application Clients to locate, connect and switch to the most suitable Application Server on the Edge and for Application Servers on the Edge to utilise the underlying 3GPP network to provide best possible services.
  - The Edge Enabler Layer developed by SA6 (3GPP EDGEAPP) provides such capabilities with easy to integrate APIs allowing Application Developers to focus better on application features.
  - Architecture Principles span application portability, service differentiation, flexible deployment, interworking with 3GPP.
  - Key features of EDGEAPP are: Service Provisioning; EAS Discovery; EES capability exposure; Network capability exposure; service continuity; security.
  - There is a synergy between 3GPP and ETSI MEC on respective architectures, with more details relationship in ETSI White Paper #36 (July 2020). The GSMA Whitepaper OPG.01: "Operator Platform: Telco Edge Proposal" (October 2020) details the synergy between 3GPP and GSMA OPG.

Key takeaways from the interactive discussions are:

- 5G will help technologies like edge computing and artificial intelligence to harmonise and enable them to work together much more efficiently.
- 3GPP Release 17 is foundational for edge computing but more will come in future releases given its importance in mobile communications and as we gradually move beyond 5G.
- Artificial Intelligence and edge computing can both serve as building blocks, albeit in different ways:
  - Network layer perspectives: AI can further optimise edge computing applications.
  - Application layer perspectives: Edge computing can be a building block for AI, e.g., offloading limited capabilities from the device to the network.
- Global initiatives like 3GPP can help reduce regional fragmentation, drive convergence and enable network-compliant rollouts that benefit the ecosystem around the world. As a global initiative, 3GPP is well placed to build on its strong relationships and collaborations with ETSI MEC and GSMA.
- It is essential that industry verticals get involved in 3GPP working groups, which is where key activities take place and where their requirements should be channelled. It is also important that verticals understand how their seemingly specific requirements could be relevant to other sectors. Being part of 3GPP is a complex but highly rewarding experience. It does not need to be a life-long commitment.

**Webinar recording:**

<https://www.youtube.com/watch?v=k3jvl5qeJZ4&t=2s>

**Poll findings.** 37% of respondents are not involved in standards organisations doing work on edge computing, which is also an opportunity to encourage more people to get involved. 37% are involved in 3GPP and other forums (e.g. 5GAA, 5G-ACIA, GSMA) while 26% are involved in ETSI and other forums. The second poll revealed a high consensus on the need for coordination on edge computing standardisation, with 65% seeing it as vital and 32% as quite important. Respondents were, however, uncertain about the need for further standardisation on edge, with 46% seeing a need and 43% not sure, possibly due to early-stage interest in the technology. The two-part webinar series and the online standards tracker are therefore key informative sources on the landscape, with future events needing to bring updates and feed in the results of trials around the world, on-going and planned.

## Highlights

This virtual workshop on RAN Release 18 for Industry Verticals was by invitation to prepare them for the TSG RAN Workshop running from 28 June to 2 July 2021. 131 people signed up for it out of the 145 people invited. The workshop connected people from 24 countries worldwide, with the highest number of participants coming from Germany, USA, France, UK and Spain.

The workshop opens with a fireside chat with Wanshi Chen (Qualcomm) as new 3GPP TSG RAN Chair, zooming on 5G Advanced and opportunities to contribute to Release 18.

- As a group, RAN aims to offer services that work for diverse industries. Release 18 is a good opportunity to continue to evolve several features, targeting intermediate needs and longer term impacts to set the foundations for further evolutions as we move towards 6G in coming years.
- Since day one of 5G, 3GPP work has encompassed both traditional eMBB while accommodating vertical domain services, such as IoT, mMTC, V2X, among others. As a group, RAN encourages people to join and take part in discussions so both sides can understand each other better and work out ways to optimise the resources available.
- Requirements from vertical associations and standards specialists:
- Maxime Flament, CTO of 5GAA: Priority requirements are based on an association-wide survey aimed at building consensus across the ecosystem, spanning positioning enhancements; LTE/NR-V2X sidelink co-existence, sidelink carrier aggregation.
- Michael Bahr, Siemens and 5G-ACIA: Priority requirements include meeting increased demand for uplink services, low-power positioning devices with high precision and enhanced URLLC.
- Tero Pesonen, joint TCCA<sup>16</sup> and PSCE: Priority requirements aim to improve coverage, availability and resilience in critical communications and public safety scenarios.
- David Vargas, BBC and 5G-MAG: Priority requirements span connection of EnTV RAN (FeMBMS) to 5G core and optimisation for simultaneous support of 5G Broadcast and NR Unicast.
- Julian Stafford, Technical Director of EUTC, and Erik Erik Guttman, Samsung and 3GPP SA1: Supporting the enhanced management of cellular networks; enabling standards-based security on the N6 interface and enabling information sharing between the energy utility and MNO during supply interruptions.
- Hyounhee Koo, SyncTechno and 3GPP Liaison Person for IALA<sup>17</sup>: Sidelink enhancements for positioning between vessels more exact information during vessel accidents; NR multicast and broadcast; non-terrestrial networks, sidelink.
- Ingo Wendler, Swiss Federal Railway and UIC<sup>18</sup>. The proposed study item for

FRMCS revolves around (1) the range of channel bandwidths less than 5 MHz to meet regulatory spectrum block allocations; (2) limitations to NR physical layer to support narrowband channel bandwidth.

- Andrea Di Giglio, Telecom Italia SpA and 5G PPP 5G-SOLUTIONS<sup>19</sup>: RAN requirements derive from use cases in living labs, e.g. future-proof design of UEs for usage in future releases; improved upload throughput; optimised performance of deterministic slicing.
- Mathew Webb, Huawei and 3GPP on passive IoT for Advanced 5G: Automated asset management and industrial sensor networks. Potential technical approaches are: envelope detection for downlink and backscatter modulation for uplink.
- Thierry Berisot, Novamint and 3GPP: Key enablers for verticals in RAN, e.g., 5G MBS/Prose (eMBB: media broadcast, public safety), Sidelink UE to UE Relay (eMBB: automotive, public safety, medical/healthcare, railway, utilities), location services such as ranging, enhanced sidelink location (eMBB: all).

### Webinar recording:

**Poll findings.** The first poll asked participants about the importance of 3GPP covering requirements for industry verticals, with most respondents saying that it's essential and quite important (64% and 32%). The second poll revealed that only a few respondents are planning follow-up collaboration or consolidation on RAN Release 18. However, there was a high turnout of verticals at the TSG RAN workshop the following week, illustrating high interest in Release 18. The third showed that 60% of respondents have already compared requirements across verticals.

# 5G User Event Series

May 2020 - June 2021

**7** virtual events

**1743** registrants

**1332** attendees

**50** countries worldwide

**21** polls

**18** associations onboard  
14 verticals, 4 network and business

**1647** poll responses

**3700+** views of recordings  
(and still counting)

Top 3 countries EU27 

Top 3 countries worldwide 

The spin-off webinar with the European Technology Platform, NetworkEurope, in October 2020 on 5G and smart networks for healthcare brings the total number of registrants up to 1874. This webinar is covered in a separate report.

## 5G User Forum - Programme Committee

The 5G User Forum is led by a group of highly experienced and committed people from across Europe. As experts in their respective fields, they define the 5G User series as timely events that drive commercial needs in the short to long term through 3GPP.

**Roland Beutler**, 5G-MAG, SWR and 3GPP

**Didier Bourse**, Nokia and Full5G

**Raffaele De Peppe**, Telecom Italia, Chair of the 5G-IA Verticals Task Force

**John Favaro**, Trust-IT and Full5G

**Maxime Flament**, CTO of 5GAA

**David Lund**, PSCE and 5G-IA Board

**Georg Mayer**, 3GPP TSG SA Chairman

**Andreas Mueller**, Chair of 5G-ACIA

**Stephanie Parker**, Vice-Chair of the 5G-IA Pre-Standardization WG, Trust-IT, Full5G

**Paul Voskar, Huawei**, 3GPP, 5GAA

Observers

**Alessandro Bedeschi**, 5G-IA Head Office

**Wanshi Chen**, 3GPP TSG RAN Chairman

**Lionel Morand**, 3GPP TSG CT Chairman

**Adrian Scrase**, CTO of ETSI Board Member

**Christian Toche**, Huawei

**Colin Willcock**, Nokia and Chair of 5G-IA
