Introductory notes

The purpose of this document is to classify and define the various stakeholder groups targeted by the 5G PPP projects.

The first part of this document (i.e. “General diagram”) shows graphically the different categories of the priority 5G PPP targeted stakeholders further to the contributions collected from Phase 2 and Phase 3 projects from December to February 2020, and further analysis at 5G PPP level.

The second part of this document (i.e. “Glossary”) includes the definitions of the different stakeholders identified in the General diagram, in alphabetical order for each Level 1 category.

Please note that the asterisk (*) after a word in italics indicates a definition elsewhere in the document.

Authors of this document: Jacques Magen (INTERINNOV, lead editor), Didier Bourse (Nokia), Pierre-Yves Danet (Orange), Hanne-Kristine Hallingby (Telenor), Werner Mohr (Nokia), Stephanie Parker and John Favarro (Trust-IT)
GENERAL DIAGRAM - THE 5G PPP TARGET STAKEHOLDERS

5G PPP Target Stakeholders

April 2020

The 5G PPP priority target stakeholders as of April 2020

- Policy makers
- Financing bodies
- Standards and Open Source organisations
- Verticals
- 5G Complementary Industry
- 5G Industry and Research
- 5G-related Organisations
- Vertical Associations

* SMEs and large companies are stakeholders of this category and in all its sub-groups

<td><strong>5G Complementary Industry</strong></td>
<td></td>
<td></td>
</tr>
<tr>
<td>System integrators</td>
<td>Systems integration can be defined as a process that includes the planning, design, implementation, and project management of a technical solution that addresses an organization's specific technical or business needs. When SI deals involve contracting for custom application development (CAD) related to the systems integration, then those activities are included in the definition of SI. SI projects typically involve different platforms and technologies. The solution may include hardware, software, and services and is consumed on premise, on demand, or in a cloud-based environment. An SI project is formalized by a contract that is constructed around solution specifications and often demands certain levels of performance against technical or business goals. The end result of an SI project is the delivery of a system that meets a stated objective and fulfills solution specifications.</td>
<td>Ibid.</td>

</tr>
<tr>
<td>Digital service providers</td>
<td>In the context of digital in the Information Society, ‘service’ “is to say, any service normally provided for remuneration, at a distance, by electronic means and at the individual request of a recipient of services”. The provider of such services are digital service providers.</td>
<td>Directive (EU) 2015/1535, <a href="https://eur-lex.europa.eu/legal-content/EN/TXT/?uri=CELEX%3A3A32015L1535">https://eur-lex.europa.eu/legal-content/EN/TXT/?uri=CELEX%3A3A32015L1535</a></td>
</tr>
<tr>
<td>IT consulting</td>
<td>IT consulting is a professional services activity around information technology. It is the delivery of advice to customers aimed at managing their IT organization and at improving an organization's IT performance, infrastructure including IT security, and related processes. IT consulting includes two main areas: IT strategy and IT operations consulting.</td>
<td>European IT observatory. (2018). <em>ICT Market report 2018/19</em>. Berlin: European IT observatory.</td>
</tr>
<tr>
<td>IT system and network integration</td>
<td>Network consulting and integration services (NCIS) are defined as those activities associated with planning, designing, and building local and wide area data networks (commonly known as LANs and WANs), including multiservice, converged wireless, and wireline networks that allow voice, video, and data applications (such as VoIP and unified messaging) to be propagated across a single, common infrastructure. Specifically, the NCIS market includes services provided to telecommunications network access and transport providers for the planning and building of the public integrated voice, data, and video network infrastructures.</td>
<td>Ibid.</td>
</tr>
<tr>
<td>Software and programming</td>
<td>Software is a set of instructions that cause a computer to perform one or more tasks. The set of instructions is often called a program or, if the set is particularly large and complex, a system.</td>
<td>Ibid.</td>

</tr>
<tr>
<td>IT management of network and software</td>
<td>Network management services are the activities, skills, facilities, and network infrastructure captured within a contract associated with outsourcing the operations of a specific segment or an entire network communication system of a company. The scope of work includes the installation and management of network tools that automatically monitor active nodes, traffic, revision management, and security. The service supplier also assists with fault isolation and resolution and enables the business to optimize the efficiency of the network and avoid any downtime. As part of the network management contract, the service supplier installs and configures the network management system and manages user moves, adds, or changes on the network, network software, and hardware upgrades.</td>
<td>Ibid.</td>
</tr>
<tr>
<td>M2M component providers</td>
<td>Machine to machine (M2M) component providers are companies providing components, e.g. sensors, RFID, a Wi-Fi or cellular communications link and autonomic computing software programmed to help a networked device interpret data and make decisions. Machine to machine (M2M) is a broad label that can be used to describe any technology that enables networked devices to exchange information and perform actions without the manual assistance of humans.</td>
<td><a href="http://internetofthingsagenda.techtarget.com/definition/machine-to-machine-M2M">http://internetofthingsagenda.techtarget.com/definition/machine-to-machine-M2M</a></td>
</tr>
<tr>
<td>Other equipment providers</td>
<td>IT equipment is defined as technological hardware used in the processing of information in the form of data (input, process, output, communication, and storage). It includes computer systems (client and server devices), system peripherals (printers and MFPs), media tablets, storage hardware and other hardware.</td>

<td>Service providers</td>
<td>Service providers in telecommunications sector are companies that provide their subscribers with access to the Internet and/or other value-added services, e.g. cloud computing, storage and e-learning.</td>
<td><a href="https://en.wikipedia.org/wiki/Service_provider">https://en.wikipedia.org/wiki/Service_provider</a></td>
</tr>
<tr>
<td>OTT providers</td>
<td>An over-the-top (OTT) media service is a streaming media service offered directly to viewers via the Internet. OTT bypasses cable, broadcast, and satellite television platforms, the companies that traditionally act as a controller or distributor of such content.</td>
<td><a href="https://en.wikipedia.org/wiki/Over-the-top_media_service">https://en.wikipedia.org/wiki/Over-the-top_media_service</a></td>
</tr>
<tr>
<td>Apps &amp; solution providers</td>
<td>An application/solution service provider is a business providing computer-based solutions/services to customers over a network, such as access to a software solution/application (e.g. customer relationship management) using a standard protocol (e.g. HTTP).</td>
<td><a href="https://en.wikipedia.org/wiki/Application_service_provider">https://en.wikipedia.org/wiki/Application_service_provider</a></td>
</tr>
<tr>
<td>Campus networks</td>
<td>A campus network, campus area network, corporate area network or CAN is a computer network made up of an interconnection of local area networks (LANs) within a limited geographical area.</td>
<td><a href="https://en.wikipedia.org/wiki/Campus_network">https://en.wikipedia.org/wiki/Campus_network</a></td>
</tr>
<tr>
<td>Technology providers and developers</td>
<td>A technology provider is a provider that develops and provides technology solution(s) which can be used by the 5G PPP projects, SMEs*, start-ups*, etc. For developers*, see below.</td>
<td></td>
</tr>
<tr>
<td>Device &amp; SW</td>
<td>A device is an object or machine - a piece of mechanical or electronic equipment - that has been invented to fulfil a particular purpose. A device typically includes a HardWare (HW) and SoftWare (SW) parts to make it independently functioning.</td>
<td><a href="http://dictionary.cambridge.org/us/dictionary/english/device">http://dictionary.cambridge.org/us/dictionary/english/device</a></td>
</tr>
<tr>
<td>Chipset and component makers</td>
<td>A chipset/component maker buys raw materials from its suppliers, assembles these into chipsets/components and gives the results to other manufacturers.</td>
<td></td>
</tr>
<tr>
<td>Equipment manufacturers</td>
<td>A manufacturer is a company that produces goods in large numbers. Telecommunications equipment is a hardware which is used for the purposes of telecommunications. Since the 1990s the boundary between telecoms equipment and IT hardware has become blurred as a result of the growth of the internet and its increasing role in the transfer of telecoms data. An original equipment manufacturer (OEM) is a company that produces parts and equipment that may be marketed by another manufacturer.</td>
<td><a href="https://dictionary.cambridge.org/dictionary/english/manufacturer">https://dictionary.cambridge.org/dictionary/english/manufacturer</a>; <a href="https://en.wikipedia.org/wiki/Telecommunications_equipment">https://en.wikipedia.org/wiki/Telecommunications_equipment</a>; <a href="https://en.wikipedia.org/wiki/Original_equipment_manufacturer">https://en.wikipedia.org/wiki/Original_equipment_manufacturer</a></td>
</tr>
<tr>
<td>Developers</td>
<td>A developer is an IT organization, software developer company, or individual (e.g. web entrepreneur) that develops Future Internet applications, products, solutions, systems, etc. A developer will use the 5G PPP projects’ services and Infrastructures to make its own test and develop its product, solution, system…</td>
<td></td>

<tr>
<td>SMEs</td>
<td>a) SME stands for Small and Medium enterprises, as defined in EU law. The main factors determining whether a company is an SME are number of employees and either turnover or balance sheet total. An SME could use some services and infrastructures provided by the 5G PPP projects, make these services available to the developers* and may also be part of verticals*.&lt;br /&gt;b) An SME is a developer* which can make its own test using the 5G PPP projects’ services and infrastructures to develop its product, solution, system, etc.</td>
<td><a href="http://ec.europa.eu/enterprise/policies/sme/acts-figures-analysis/sme-definition/index_en.htm">http://ec.europa.eu/enterprise/policies/sme/acts-figures-analysis/sme-definition/index_en.htm</a></td>
</tr>
<tr>
<td>Start-ups</td>
<td>a) A start-up is a company, a partnership or temporary organization designed to search for a repeatable and scalable business model. These companies, generally newly created, are in phase of development and research for markets. A start-up could use some services and infrastructures provided by the 5G PPP projects, make these services available to the developers* and may also be part of verticals*.&lt;br /&gt;b) A start-up is a developer* which can make its own test using the 5G PPP projects’ services and infrastructures in order to develop its product, solution, system, etc.</td>
<td>Steve Blank and Bob Dorf “The Startup owner’s manual: the step-by-step Guide for Building a great company, cf. <a href="http://steveblank.com/2010/01/25/whats-a-startup-first-principles/">http://steveblank.com/2010/01/25/whats-a-startup-first-principles/</a></td>
</tr>
<tr>
<td>Spin-offs</td>
<td>When a company creates a new independent company by selling or distributing new shares of its existing business, this is called a spin-off. A spin-off is also known as a spin-out or starbust.</td>
<td><a href="https://www.investopedia.com/terms/s/spinoff.asp">https://www.investopedia.com/terms/s/spinoff.asp</a></td>
</tr>
<tr>
<td>Niche players</td>
<td>A niche in the market is a specific area of marketing which has its own particular requirements, customers, and products. Niche players are (small) companies that are looking at doing well if they can fill a specific market niche.</td>
<td><a href="https://www.collinsdictionary.com/dictionary/english/niche">https://www.collinsdictionary.com/dictionary/english/niche</a></td>
</tr>
<tr>
<td>Universities</td>
<td>A university is an institution of higher (or tertiary) education and research, which awards academic degrees in various academic disciplines. Universities typically provide undergraduate education and postgraduate education.</td>
<td><a href="https://en.wikipedia.org/wiki/University">https://en.wikipedia.org/wiki/University</a></td>
</tr>
<tr>
<td>Research institutions</td>
<td>A research institute (research organization) is an establishment endowed for doing research. Research institutes may specialize in basic research or may be oriented to applied research.</td>
<td><a href="https://en.wikipedia.org/wiki/Research_institute">https://en.wikipedia.org/wiki/Research_institute</a></td>

<td>The 5G Automotive Association (5GAA) is a global, cross-industry organisation of companies from the automotive, technology, and telecommunications industries (ICT), working together to develop end-to-end solutions for future mobility and transportation services.</td>
<td><a href="https://5gaa.org/">https://5gaa.org/</a></td>
</tr>
<tr>
<td>ERTICO</td>
<td>ERTICO – ITS (Intelligent Transport Systems and Services) Europe is a public-private partnership of 120 companies and organisations representing service providers, suppliers, traffic and transport industry, research, public authorities, user organisations, mobile network operators, and vehicle manufacturers. ERTICO’s work focuses on Connected &amp; Automated Driving, Urban Mobility, Clean Mobility, and Transport &amp; Logistics.</td>
<td><a href="https://ertico.com/">https://ertico.com/</a></td>
</tr>
<tr>
<td>5GACIA</td>
<td>5G-ACIA is a global forum for shaping 5G in the industrial domain. The paramount objective of 5G-ACIA is to ensure the best possible applicability of 5G technology for connected industries, in particular the manufacturing and process industries.</td>
<td><a href="https://www.5g-acia.org/">https://www.5g-acia.org/</a></td>
</tr>
<tr>
<td>IIC</td>
<td>The Industrial Internet Consortium (IIC) is a not-for-profit partnership of industry, government and academia. It was founded in March 2014 to bring together the organizations and technologies necessary to accelerate the growth of the industrial internet by identifying, assembling, testing and promoting best practices. Members work collaboratively to speed the commercial use of advanced technologies. Membership includes small and large technology innovators, vertical market leaders, researchers, universities and government organizations. The resources of the IIC give organizations the guidance needed to strategically apply digital technologies and achieve digital transformation.</td>
<td><a href="https://www.iiconsortium.org/">https://www.iiconsortium.org/</a></td>
</tr>
<tr>
<td>ECHAlliance</td>
<td>The European Connected Health Alliance (ECHAlliance) facilitates multi-stakeholder connections around ecosystems, driving sustainable change and disruption in the delivery of health and social care. The global network of Digital Health Alliances connects 78 countries and 4.4 billion people (Europe, USA, Canada, China, Africa, Asia, the Caribbean and Americas and the Pacific), and involves a community of over 16,500 experts. The Digital Health Observatory (DHO) and The Digital Health Society (DHS) movement facilitate and promote the transfer of knowledge, experiences and best practices creating a community of knowledge in Digital Health globally.</td>
<td><a href="https://echalliance.com/">https://echalliance.com/</a></td>
</tr>
<tr>
<td>EUTC</td>
<td>Technology is rapidly changing the role of telecom in Europe’s electric, gas and water utilities, energy companies and other critical infrastructure companies. Many are using their vast experience in building and managing sophisticated telecommunications networks to enter Europe’s new competitive telecoms markets. Many are also facing issues introducing new wireless communications systems and managing internal telecoms businesses in a shared services environment. To meet this need, The European Utilities Telecom Council (EUTC) has developed a uniquely European program that will build on the Utilities Technologies Council (UTC)’s 60 years of experience, existing strengths and services.</td>

<tr>
<td>EBU</td>
<td>The European Broadcasting Union (EBU) is the world’s leading alliance of public service media (PSM), with 116 member organizations in 56 countries and have an additional 34 Associates in Asia, Africa, Australasia and the Americas. EBU’s Members operate nearly 2,000 television, radio and online channels and services, and offer a wealth of content across other platforms. Together they reach an audience of more than one billion people around the world, broadcasting in more than 160 languages. The EBU strives to secure a sustainable future for public service media.</td>
<td><a href="https://www.ebu.ch/home">https://www.ebu.ch/home</a></td>
</tr>
<tr>
<td>NEM</td>
<td>The NEM Initiative (New European Media Initiative) was established as one of the European Technology Platform under the Seventh Framework Programme, aiming at fostering the convergence between consumer electronics, broadcasting and telecoms in order to develop the emerging business sector of networked and electronic media. In order to respond to new need and requirements of the Horizon 2020 programme, the NEM initiative enlarged its focus towards creative industries and changed its name from Networked an Electronic Media Initiative to New European Media, dealing with Connected, Converging and Interactive Media &amp; Creative Industries, driving the future of digital experience. The NEM constituency includes all major European organisations working in the networked and electronic media area, including content providers, creative industries, broadcasters, network equipment manufacturers, network operators and service providers, academia, standardisation bodies and government institutions. The NEM Initiative is supporting Europe’s activities on the Future Internet and is actively contributing to the definition of the related research and innovation areas.</td>
<td><a href="https://nem-initiative.org/">https://nem-initiative.org/</a></td>
</tr>
<tr>
<td>ECSO</td>
<td>The European Cyber Security Organisation (ECSO) is the private counterpart to the European Commission in implementing the contractual Public-Private Partnership (cPPP) on cybersecurity. They unite a variety of European cybersecurity stakeholders across the EU Member States, the European Free Trade Association (EFTA) and H2020 Programme associated countries. ECSO's main goal is to develop a competitive European cybersecurity ecosystem, to support the protection of the European Digital Single Market with trusted cybersecurity solutions, and to contribute to the advancement of the European digital autonomy.</td>
<td><a href="https://www.ecs-org.eu/">https://www.ecs-org.eu/</a></td>
</tr>
<tr>
<td>PSC Europe</td>
<td>The Public Safety Communications Europe Forum (PSCE) is a permanent autonomous organisation, working to foster excellence in the development and use of public safety communication and information management systems by consensus building. It was established as a result of a European Commission funded project in 2008. Since then, PSCE has evolved into an independent forum, where representatives of public safety user organisations, industry and research institutes can meet to discuss and exchange ideas and best practices, develop roadmaps and improve the future of public safety communications. PSCE ensures the continual improvement and evolution of public safety information and communication systems for the safety and security of the citizens.</td>

</table>

**Verticals**

**Automotive**

The automotive industry comprises a wide range of companies and organizations involved in the design, development, manufacturing, marketing, and selling of motor vehicles.  
https://en.wikipedia.org/wiki/Automotive_industry

**Car manufacturers**

Commonly known as Original Equipment Manufacturers (OEMs), their strength is in designing cars, marketing cars, ordering the parts from suppliers, and assembling the final product.  
https://medium.com/self-driving-cars/the-automotive-supply-chain-explained-d4e74250106f

**Car technology providers**

Companies that supply parts or systems directly to OEMs are called Tier 1 suppliers. Tier 2 suppliers supply parts that are integrated into cars, but do not sell directly to OEMs (e.g. computer chip manufacturers). 5G technology suppliers may be either Tier 1 or Tier 2 suppliers, and may include CAM service and HD map providers.  
https://medium.com/self-driving-cars/the-automotive-supply-chain-explained-d4e74250106f

**Automotive services**

Any type of services provided in relation with the automotive sector e.g. insurance, driver assistance, security on content delivery, etc.

**Broadcasting & Media**

Broadcasting is the distribution of audio or video content to a dispersed audience via any electronic mass communications medium, but typically one using the electromagnetic spectrum (radio waves), in a one-to-many model.

<tr>
<td>Factories of the future</td>
<td>The Factory of the Future has an evolving definition, including different names such as Smart Manufacturing, Industry 4.0 or the Digital Enterprise. While the terms vary, some elements are always in common: it is the product of fast-changing disruptive technologies, whereby information technology and operational technology are both introducing drastic innovations.</td>
<td><a href="https://www.industryweek.com/technology-and-iiot/emerging-technologies/article/21972483/preparing-for-the-factory-of-the-future">https://www.industryweek.com/technology-and-iiot/emerging-technologies/article/21972483/preparing-for-the-factory-of-the-future</a></td>
</tr>
<tr>
<td>Manufacturers</td>
<td>Manufacturing is the production of products for use or sale using labor and machines, tools, chemical or biological processing or formulation and is the essence of secondary industry. The term may refer to a range of human activity from handicraft to high tech but is most commonly applied to industrial design, in which raw materials from primary industry are transformed into finished goods on a large scale.</td>
<td><a href="https://en.wikipedia.org/wiki/Manufacturing">https://en.wikipedia.org/wiki/Manufacturing</a></td>
</tr>
<tr>
<td>IoT technology providers</td>
<td>The definition of the Internet of Things has evolved due to the convergence of multiple technologies, real-time analytics, machine learning, commodity sensors, and embedded systems. IoT technology providers operate in the traditional fields of embedded systems, wireless sensor networks, control systems, automation (including home and building automation), and a growing list of other fields.</td>
