Future Optical Networks Workshop
Panel A Discussion Topics

1. We have experienced increasing BW values in FTTH networks. Do we have the Core and Access Networks prepared to provide these figures to our clients ?
2. Are operators investing in all optical networks with enough capacity to efficiently deal with these requirements in the Access Network?
3. How to address deployment costs in low-density areas?
4. How to share data adequate for AI/ML developments on the control plane? Or will these be proprietary - and if yes, owner by operators or by manufacturers?
5. What are the recent successful practices in the industry in terms of new commercial scenarios and business models? What new technologies have been pioneered （depending on the presentation）?
